- Created a food ordering application named '*Sweed*', enabling users to enjoy the best food from their preferred restaurants at home or at office
- Developed another app named '*Sweed Delivery Application*' to track the real-time food delivery

INDEPENDENT PROJECTS

Title: E-Kurakani Mobile Application

Summary: A Flutter and Django-powered app for secure and convenient counseling in fields like medical, education, business, and psychology. Also, payment gateway like Khalti is integrated for user convenience.

Individual Role: Led the development of the application, overseeing both design and API integration while providing essential support to colleagues during the integration process

Title: Story Application

Summary: As a freelancer for a US-based company named **Novus Tales LLC (800 N King St, Apt 304, Wilmington)**, I took the lead in developing a cutting-edge story application. It is a location-based social media platform that allows users to share photos and videos with others in their immediate vicinity, currently available on Play Store.

Individual Role: Led the application development, overseeing the entire process and ensuring its successful launch on the Play Store for the Story Application.

Title: Run Number Application

Summary: An educational game that provides users with an engaging platform to play and learn about numbers, currently available on Play Store.

Title: Advance Note Application

Summary: A versatile app crafted to elevate the user's note-taking experience, currently available on Play Store.
